

Education

Faculty of Engineering, UNAM	Mexico City
B.S. in Computer Engineering (Degree Pending)	2021 – 2026
Cisco training, Faculty of Engineering, UNAM: CCNP Security Diploma (Jun 2026, in process) • CCNP Enterprise Diploma — ENCOR & ENARSI (2025) • CCNA prep course (2024)	
Cisco Networking Academy badges: CCNA Introduction to Networks; Switching, Routing & Wireless Essentials	May 2025
Certifications	
NVIDIA Deep Learning Institute: Adding New Knowledge to LLMs; Fundamentals of Deep Learning	Nov 2025
CertiProf: Cybersecurity Awareness (CAPC) (valid to Nov 2027) • ScrumStudy: Scrum Fundamentals Certified (2023)	

Projects & Infrastructure

Hybrid Homelab — Self-Hosted Kubernetes Platform (K3s / ARM64)	Personal Project
Infrastructure Administrator	2024 – Present
- Migrated 15+ services from Docker to Kubernetes (K3s) on Raspberry Pi 5 (ARM64 / edge) with zero downtime; full lifecycle via GitOps (ArgoCD app-of-apps), Traefik ingress, automated TLS (cert-manager + Cloudflare DNS-01) and GitHub Actions CI with multi-arch builds and manifest write-back. - Designed for fault-domain isolation: out-of-cluster VPN (WireGuard) and DNS (Pi-hole + Unbound), so remote access and name resolution survive a cluster outage. Observability with Prometheus, Grafana and Loki, alerting to Slack. Two years in continuous operation.	
NoNameStore — Cloud-Native Platform (Kubernetes + GitOps)	Personal Project
DevOps & Software Engineer	2025
Provisioned and hardened (SELinux) a multi-node Kubernetes cluster on Linux (Arch/Rocky) over KVM/QEMU, automated end-to-end with Ansible (IaC), and built a Tekton + Kaniko CI/CD pipeline — webhook-triggered builds, commit-hash tagging, ArgoCD delivery to staging and production (auto-sync, self-heal) under scoped RBAC, StatefulSets/NFS persistence and Fluentd + OpenSearch logging.	

Experience

Faculty of Engineering, UNAM	Mexico City
Network & Server Infrastructure	Aug 2026 – Present
Assigned to deploy a new DNS service for the faculty, configure Cisco network equipment, and provision Linux servers for internal services across several concurrent projects.	
Brive	Mexico City
Automation Executive — Business Intelligence	Jun 2026 – Present
Build automated business workflows in Salesforce, replacing manual repeated steps across internal processes; maintain and iterate on two AI agents running in the company platform, including live debugging and behaviour tuning.	
CTIN	Mexico City
Test Automation Lead — iOS & Android	May 2025 – Dec 2025
- Promoted from intern to lead the iOS stream after two months, then the Android project as well — two mobile streams, one automation engineer each. - Rebuilt an abandoned automation suite (~250 cases, ~20 runs) the team had stopped trusting: consolidated duplicated per-flow logic behind shared instances, replaced deep conditional chains with data structures, and automated the manual smoke test — cutting the validation cycle from a full manual week to 3 days. - Evaluated Jenkins to orchestrate the suites and built a proof of concept (not deployed before contract end); tracked defects in Jira/Zephyr and trained the incoming leads on the refactored suite.	
Microsoft Artificial Intelligence Laboratory, UNAM	Mexico City
IT Support & Infrastructure Specialist (Social Service)	Dec 2023 – Dec 2024
- Rewired the physical network of an entire building (structured cabling), configured Cisco switches across LAN and perimeter devices, and did L2/L3 troubleshooting via CLI. - Provisioned Linux workstations for teaching labs (installation, accounts, permissions); resolved L1/L2 incidents and maintained lab and compute hardware. - Built and deployed the Digital Transformation division website (still in production) and a login system for the administrative platform; deployed facial recognition for the campus camera system.	

Technical Skills

Containers, CI/CD & IaC: Kubernetes (K3s), Docker, Helm, ArgoCD, Tekton, Kaniko, GitHub Actions, Jenkins, Ansible
Observability: Prometheus, Grafana, Loki, Alertmanager, Fluentd, OpenSearch
Networking & Security: Routing (OSPF/BGP), CLI troubleshooting, structured cabling, WireGuard, Cloudflare DNS, Traefik, cert-manager, Pi-hole/Unbound, hardening (SSH, Fail2Ban)
Systems & Programming: Linux (Arch/Rocky), Bash, Python, Go • Selenium, Cucumber • Scrum, Jira
Languages: Spanish (native) • English (B1; C1 reading & listening)
